Is your organization committed to cultivating leaders who can capitalize on the relationships among learning, learning technologies, applied research and business performance? Then it’s time to consider the PhD concentration in Learning Technologies Design Research (LTDR) at George Mason University’s College of Education and Human Development.

An innovative program that engages doctoral students in real world, workplace-based integrated design and research, LTDR addresses cross disciplinary progressive cycles of design, development, and research focused on emerging technologies such as mobile learning, virtual worlds, and augmented reality.

As a doctoral student in LTDR, you will build your credibility as an expert in the field of learning technologies as well as consider an R&D approach investigating new directions in the field that can integrate with your current work responsibilities or advance your career in a different direction. The LTDR PhD concentration focuses on promoting strategic thinking, innovation and creativity in the design of learning technologies that can leverage current and future talent to enhance your organization’s human capital productivity and achieve organizational goals.
