**ECED 514.003: Mathematics and Science for Diverse Young Learners (3:3:0)**

**ECED 514.600: Mathematics and Science for Diverse Young Learners (3:3:0)**

**Spring 2014**

**Hybrid Course- 47% Online and 53% Face to Face**

**Face to Face meetings on**

**2/13, 2/20, 2/27, 3/6, 3/20, 4/3, & 4/10**

**Thursdays, 5:30-8:10pm**

**Founders Hall 470 (Arlington Campus)**

**Instructor:** Wendy Frazier

**Telephone:** 703-993-2043

**\*Email address:** [wfrazier@gmu.edu](mailto:wfrazier@gmu.edu)

**Office hours:** Face to face by appointment before or after class

Online via Collaborate on Black Board

**\*Best mode of contact**

### **Course Description**

Examines ways to foster development of mathematics and science in preschool to third-grade children. Covers construction of math and science lessons and hands-on experiences that address the needs of culturally, linguistically, and ability diverse children.

**Prerequisite:** Admission to the Early Childhood Education program or approval of course instructor.

**Note:** Field experience required.

### **Nature of Course Delivery**

This course utilizes a distributed learning format requiring timely and active participation of all students throughout the semester. Activities to support student achievement of the learner outcomes include instructor presentations, videos, student team presentations, collaborative student work in small groups in class and in on-line discussion groups, assigned readings, and projects leading to written products. Students engage in timely critical reflection and accountable talk related to the learning activities.

### **Learner Outcomes**

This course is designed to enable students to do the following:

1. Develop an understanding of the changing focus in both curricula and pedagogy at the early childhood level and implications for mathematics and science instruction.
2. Develop strategies to help young children become mathematically and scientifically literate, think critically and creatively, and to see the relationships between mathematics, science, social studies, and language/literacy.

3. Develop the skills necessary to utilize a variety of methods in teaching mathematics and science to young children.
4. Develop insight in selecting, modifying, and presenting instructional activities in mathematics and science.
5. Develop science activities for young children using the scientific process with an emphasis on describing, analyzing, and quantitatively presenting findings.
6. Construct mathematics and science experiences in an environment that promotes equity and responds to cultural, linguistic, and ability diversity.
7. Use state and local curriculum standards for mathematics and science, the standards identified by the National Council of Teachers of Mathematics, and national-level science standards to plan instruction.
8. Describe the role of family and community knowledge, experience, and resources in planning and implementing mathematics and science content in the curriculum.
9. Use a variety of sources for ideas and materials useful in teaching mathematics and science when planning instruction.
10. Integrate mathematics and science objectives into planning and implementing an integrated project.
11. Use authentic assessment strategies to describe young children's understanding of mathematics and science concepts.
12. Reflect on one's own use of inquiry strategies in facilitating children's learning of mathematics and science concepts.

### **Professional Standards**

This concentration complies with the standards for teacher licensure established by the National Association for the Education of Young Children.

### **Required Texts**

Achieve Inc. (2013). *Next generation science standards*. Washington, DC: Author.

### **George Mason University Policies and Resources for Students**

- Academic integrity (honor code, plagiarism) – Students must adhere to guidelines of the George Mason University Honor Code [See <http://oai.gmu.edu/honor-code/>].
- Mason Email – Students are responsible for the content of university communications sent to their George Mason University email account and are required to activate their account and check it regularly. All communication from the university, college, school, division, and program will be sent to students solely through their Mason email account.
- Students must follow the university policy for Responsible Use of Computing [See <http://universitypolicy.gmu.edu/policies/responsible-use-of-computing/>].
- Counseling and Psychological Services – The George Mason University Counseling and Psychological Services (CAPS) staff consists of professional counseling and clinical psychologists, social workers, and counselors who offer a wide range of services (e.g., individual and group counseling, workshops, and outreach programs) to enhance students' personal experience and academic performance [See <http://caps.gmu.edu/>].
- Office of Disability Services – Students with disabilities who seek accommodations in a course must be registered with the George Mason University Office of Disability Services (ODS) and inform their instructor in writing at the beginning of the semester <http://ods.gmu.edu/>].
- Students must follow the university policy stating that all sound emitting devices shall be turned off during class unless otherwise authorized by the instructor.
- The Writing Center (Optional Resource) – The George Mason University Writing Center staff provides a variety of resources and services (e.g., tutoring, workshops, writing guides, handbooks) intended to support students as they work to construct and share knowledge through writing [See <http://writingcenter.gmu.edu/>].
- University Libraries (Optional Resource) – The George Mason University Libraries provide numerous services, research tools, and help with using the library resources [See <http://library.gmu.edu/>].

## **Professional Dispositions**

Students are expected to exhibit professional behaviors and dispositions at all times.

**Core Values Commitment:** The College of Education and Human Development is committed to collaboration, ethical leadership, innovation, research-based practice, and social justice. Students are expected to adhere to these principles.

### ***Collaboration***

Collaboration is an important human activity that involves shared responsibility in promoting healthy, productive lives, and educational success. We commit ourselves to work toward these goals in genuine partnerships with individuals, families, community agencies, schools, businesses, foundations, and other groups at the local, regional, national, and international levels.

### ***Ethical Leadership***

In all professions represented by the college, leadership is an essential component denoting ability and willingness to help lead professional practice to higher levels. We commit ourselves to practice ethical leadership through deliberate and systematic attention to the ethical principles that guide all leaders in a moral society.

### ***Innovation***

We have a history of creating dynamic, innovative programs, and we are dedicated to continue creating innovative approaches in all areas of our work. We commit ourselves to seeking new ways to advance knowledge, solve problems, improve our professional practice, and expand on our successes.

### ***Research-Based Practice***

The best practice in any discipline is based upon sound research and professional judgment. We commit ourselves to basing our instruction, scholarship, and policy recommendations on well-established principles that, wherever possible, emerge from research and reflection on its implications for professional practice.

### ***Social Justice***

Social justice embodies essential principles of equity and access to all opportunities in society, in accordance with democratic principles and respect for all persons and points of view. We commit ourselves to promoting equity, opportunity, and social justice through the college's operations and its missions related to teaching, research, and service.

For additional information on the College of Education and Human Development, Graduate School of Education, please visit our website [See <http://gse.gmu.edu/>].

## Course Requirements

### General Requirements

1. The completion of all readings assigned for the course is assumed. Because the class will be structured around discussion and small group activities, it is imperative that students keep up with the readings and participate in class.
2. Attendance in class and/or online is important to students' learning; therefore, students are expected to make every effort to attend class sessions and/or complete online modules within the designated timeframe. Absences, tardiness, leaving early, and not completing online modules in the designated timeframe may negatively affect course grades. If, due to an emergency, students will not be in class, they must call the instructor and leave a message or send an email before class. The following policy is from the university course catalog:

Students are expected to attend the class periods of the courses for which they register. In-class participation is important not only to the individual student, but also to the class as a whole. Because class participation may be a factor in grading, instructors may use absence, tardiness, or early departure as de facto evidence of nonparticipation. Students who miss an exam with an acceptable excuse may be penalized according to the individual instructor's grading policy, as stated in the course syllabus.

3. In line with Mason's policy that students should not be penalized because of observances of their religious holidays, students shall be given an opportunity to make up, within a reasonable time, any academic assignment that is missed due to individual participation in religious observances. It is the student's responsibility to inform the instructor of any intended absences for religious observations in advance of the class that will be missed. Notice should be provided in writing as soon as possible.
4. During face-to-face and live online meetings, cell phones, pagers, and other communicative devices are not allowed in this class. Students must keep them stowed away and out of sight. Laptops or tablets (e.g., iPads) may be permitted for the purpose of taking notes only. Engaging in activities not related to the course (e.g. gaming, email, chat, etc.) will result in a significant deduction in their participation grade.
5. It is expected that assignments will be turned in on time. However, it is recognized that students occasionally have serious problems that prevent work completion. If such a dilemma arises, students should speak to the instructor prior to the assignment due date (when possible). If the student does not communicate with the instructor, a late penalty will be applied.
6. Mason is an Honor Code university; please see the Office for Academic Integrity for a full description of the code and the honor committee process. The principle of academic integrity is taken very seriously and violations are treated gravely. What does academic integrity mean in this course? Essentially this: when responsible for a task, students will perform that task. When students rely on someone else's work in an aspect of the performance of that task, they will give full credit in the proper, accepted form. Another aspect of academic integrity is the free play of ideas. Vigorous discussion and debate are encouraged in this course, with the firm expectation that all aspects of the class will be conducted with civility and respect for differing ideas, perspectives, and traditions. When in doubt (of any kind), students will ask for guidance and clarification.

## Written Assignments

All formal written assignments will be evaluated for content and presentation. The American Psychological Association, Sixth Edition (APA) style will be followed for all written work. All written work unless otherwise noted must be completed on a word processor and should be proofread carefully. (Use spell check!) If students are not confident of their own ability to catch errors, they should have another person proofread their work. When in doubt, they should check the APA manual. Portions of the APA manual appear at the Style Manuals link on the Mason library web guide at <http://infoguides.gmu.edu/content.php?pid=39979>. Students may consult the Writing Center for additional writing support.

Students will do the following:

1. Present ideas in a clear, concise, and organized manner. (Avoid wordiness and redundancy.)
2. Develop points coherently, definitively, and thoroughly.
3. Refer to appropriate authorities, studies, and examples to document where appropriate. (Avoid meaningless generalizations, unwarranted assumptions, and unsupported opinions.)
4. Use correct capitalization, punctuation, spelling, and grammar.

## Grading Criteria

A = 95 – 100

A- = 90 – 94

B+ = 87 – 89

B = 83 – 86

B- = 80 – 82

C = 70 – 79

F = < 70

## Grading Policy

All CEHD undergraduate and graduate students are held to the university grading policies as described in the Academic Policies section of the current catalog, which can be accessed at <http://catalog.gmu.edu>. Those students enrolled in a CEHD Licensure Graduate Certificate program, however, must earn a B- or better in all licensure coursework. A degree-seeking graduate student will be dismissed after accumulating grades of F in two courses or 9 credits of unsatisfactory grades (C or F) in graduate courses. A 3.0 grade point average is required for completion of the graduate degree.

### Specific Course Assignments

Assignments	Due Dates*	Points
Participation (Individual/group/preparation)	<i>Ongoing</i>	15
Group Topic Presentations	<i>Various (class reading selection due Feb 18, photocopy requests due Feb 25)</i>	35
Informal Assessment Video Analysis [ONLINE]	<i>March 4</i>	25
Lesson Plan Deconstruction [ONLINE]	<i>March 18</i>	20
Home-School Connections [ONLINE]	<i>March 25</i>	10
Good Games Through the Grades [ONLINE]	<i>March 27</i>	10
Teaching Observation Analysis	<i>April 3</i>	25
Reflection for Year Long Planning [ONLINE]	<i>April 8</i>	10
<b>TOTAL</b>		<b>150</b>

\*Submit all assignments via email to [wfrazier@gmu.edu](mailto:wfrazier@gmu.edu) by 11:59pm on due date

#### Attendance and Participation (15 points)

Because active participation and engagement are imperative for optimal learning, preparation for and participation in in-class activities will be evaluated based on the following criteria:

- Students attend class, arrive on time, and stay for the entire class period.
- Students complete readings and prepare for class activities prior to class as is evidenced by their ability to discuss and write about the concepts presented and examined in the texts as well as participate fully in related activities.
- Students are actively involved in in-class and online learning experiences as is evidenced by (1) participating in all activities, (2) engaging in small and large group discussions, (3) not using laptops and other electronic devices during class time except as approved to support learning within the current class activity, (4) completing written work related to the activities, and (5) supporting the participation and learning of classmates on-line and face-to face.
- Students show evidence of critical reflective thinking through in-class and online discussions, activities, and written reflections.

**Note:** To determine whether the campus is closed due to inclement weather, call 703-993-1000 or go to [www.gmu.edu](http://www.gmu.edu).

### **Group Topic Presentations (35 points) [ONLINE and FACE TO FACE]**

- Students will choose presentation groups based on a topic of interest listed on the class schedule on the syllabus. All members will participate in gathering information, preparing materials, and presenting. Some class time will be provided to work in groups.
- Students will select an appropriate article or chapter to provide to the class at least a week before the presentation that provides foundational information related to the topic (email a pdf of the reading selection to your instructor by due date).
- Groups will prepare and present an informative and interactive 25–30 minute presentation on their mathematics or science topic with all group members participating equally.
- The presentation will include:
  - An overview of the topic to include the key ideas or content and the importance of the topic to students' mathematical or scientific learning supported by class readings and additional resources
  - A research-based developmental sequence or learning trajectory for pre-kindergarten-3<sup>rd</sup> grade students specific to the topic
  - A list of state and national content standards related to the topic
  - Lesson ideas or learning activities for teaching the topic including the modeling of (and audience participation in) at least 1 learning activity with all appropriate materials during the presentation
  - Strategies for instruction in the topic for a range of learners
  - A list of at least 10 resources related to teaching the topic that could include children's literature, websites, manipulatives or materials, or other teacher resources
  - A handout that includes all of the above and references used to develop the presentation (distribute one paper copy to each of your audience members; email a pdf of handout to instructor by 11:59 PM of presentation night for posting on Blackboard)

### **Informal Assessment Video Analysis (25 points) [ONLINE]**

Students will choose one video clip on Blackboard to analyze.

In a bulleted list or in paragraphs, students will answer in detail the following questions:

- List and provide evidence for four skills/ knowledge the child has mastered.
- List and provide evidence for three skills/ knowledge the child is developing.
- List and provide evidence for two skills/ knowledge that are emergent for the child or which might reasonably be expected to develop next.
- Develop and list five learning objectives for what the student could next be expected to become familiar with, learn, or master.
- Provide short descriptions for three whole or small group learning experiences or lessons based on the learning objectives to further the child's learning in the topic or content area.
- Describe and provide evidence for how the teachers' lessons could be adapted to better meet the individual needs of the learner based on his or her current skills, knowledge, and interests.

Students will note which video clip was used.

Include citations of at least two course readings to support the analysis.

Due by due date via email to [wfrazier@gmu.edu](mailto:wfrazier@gmu.edu)

### **Lesson Plan Deconstruction (20 points) [ONLINE]**

Students will find a mathematics or science lesson plan on one of the web sites listed below. They will either write a paper or use track changes and comments to critically analyze an existing lesson from one of the sites listed below.

Illuminations (<http://illuminations.nctm.org/Lessons.aspx>)

Thinkfinity (<http://www.thinkfinity.org/lesson-plans>)

NASA (<http://www.grc.nasa.gov/WWW/k-12/aeroact.htm>)

Points that should be addressed in the analysis:

- Is the lesson plan appropriate for the intended grade?
- Identify state and national standards listed in the lesson. Are there others represented in the lesson?
- Identify skills that must be present before this lesson is taught. What options does the lesson provide for challenging or remediating students with differing skill levels?
- Identify adaptations provided for diverse learners. What adaptations should be added?
- Identify plans to involve the family or extend the lesson at home. If not included in the lesson, how can the home-school connection be made?
- Identify areas where students and/ or teachers might experience challenges to a successful lesson. What preparations or adaptations are provided or should be provided to ensure a great lesson?
- If the student chooses to write a paper, the lesson should be attached.

Due by due date via email to [wfrazier@gmu.edu](mailto:wfrazier@gmu.edu)

### **Home-School Connections to Mathematics and Science (10 points) [ONLINE]**

Teachers of young children are particularly responsible for initiating and encouraging communication between their students' families and the school.

The student will develop **one** of the following:

- A one page handout with ideas for families to extend mathematics and science development that builds on classroom activities on a particular topic or concept. The student must provide opportunities for the child to bring back products done with family members at home.
- A detailed plan for a "skill backpack". The backpack can remediate or extend a mathematics or science skill that students often have a difficult time developing or provide an extension of a classroom activity for students with advanced proficiency. The student must provide opportunities for the child to bring back products done with family members at home.
- A detailed plan for a family mathematics and/or science night. The plan should include how the student will involve parents and what activities will be done.

Include citations of at least two course readings to support work.

Due by due date via email to [wfrazier@gmu.edu](mailto:wfrazier@gmu.edu)

**Good Games Through the Grades (10 points) [ONLINE]**

There are many online and computer games that promise to meet mathematics and science objectives. The teacher is responsible for previewing games and ensuring that each activity is an enriching use of the child's time. The student will play five games from the list in the folder labeled "Games for Review" on Blackboard and develop an evaluation rubric to rate each game. The rubric should include 5 to 10 items to determine the quality of the games for mathematics and science development. List the games reviewed and approximate grade level targeted. (The games listed are not necessarily *good* games.)

Include citations of at least two course readings to support work.

Due by due date via email to [wfrazier@gmu.edu](mailto:wfrazier@gmu.edu)

**Teaching Observation Analysis (25 points)**

Students will observe **one** mathematics lesson *or* science lesson (can be interdisciplinary), at his or her school. Based on the observation, students will prepare a paper using the attached template (**Attachment 1**). The focus is on describing, analyzing, and reflecting upon the instructional content and strategies the teacher uses to teach mathematics or science. The paper should provide specific linkages to course readings (include citations as noted in the rubric).

Due by due date via email to [wfrazier@gmu.edu](mailto:wfrazier@gmu.edu)

**Reflection for Year-Long Planning (10 points) [ONLINE]**

The student will write a 4-5 page paper using APA format that describes the mathematics and science material covered in the class that he or she found most interesting, most immediately applicable, most surprising, and most difficult. The student will discuss how his or her mathematics and science lessons for the upcoming year will reflect the readings, class discussions/ lessons, and assignments to include aspects of his or her mathematics or science teaching that will remain the same, aspects that will change, and why.

Include citations of at least two course readings to support work. Due by due date via email to [wfrazier@gmu.edu](mailto:wfrazier@gmu.edu)

### Group Topic Presentation Evaluation Rubric

	<b>Exceeds Expectation</b>	<b>Meets Expectations</b>	<b>Does Not Meet Expectations</b>	<b>___/35 Points and Comments</b>
<b>Related Article</b> <i>2 points</i>	An appropriate and relevant article is provided for students with several links to the article during the presentation	An appropriate and relevant article is provided for students with links to the article during the presentation	The article is either not appropriate or relevant to the topic and/or there aren't any links to the article during the presentation	
<b>Topic Overview</b> <i>3 points</i>	A detailed description of the mathematics or science topic that is supported by references to class or other readings	Description of the mathematics or science topic that is supported by references to class or other readings	Limited or no description of the mathematics or science topic and/ or that is not supported by references to readings	
<b>Developmental sequence</b> <i>5 points</i>	A thorough, research supported description of the stages of knowledge acquisition related to the topic	A research supported description of the stages of knowledge acquisition related to the topic	A lack of description of the stages of knowledge acquisition or inaccurate or not research supported description	
<b>Learning Standards</b> <i>2 points</i>	Complete listing of all state and national standards related to the topic	List of state and national standards related to the topic	Incomplete list of state and national standards related to the topic	
<b>Learning Activities</b> <i>5 points</i>	Detailed listing and explanation (at least 5) of learning activities to master the essential concepts related to the topic	Listing and explanation of learning activities (at least 5) to master the essential concepts related to the topic	Incomplete listing and explanation of learning activities that will not help students to master the essential concepts related to the topic	
<b>Strategies for instruction</b> <i>5 points</i>	Comprehensive instructions for how to teach about the topic for a range of learners	Instructions for how to teach about the topic for a range of learners	Limited or no instructions for how to teach the topic without focusing on a range of learners	
<b>Resources</b> <i>5 points</i>	A variety of carefully selected materials (at least 10) and resources to facilitate instruction related to the topic	Resources (at least 10) to facilitate instruction related to the topic	Limited or no materials and resources and/or materials that do not facilitate instruction related to the topic.	
<b>Visual aids and Modeling</b> <i>3 points</i>	The use of visual aids and effective modeling during the presentation facilitates the clarity and value of the presentation	There is use of visual aids and modeling that somewhat facilitate the clarity and value of the presentation	Limited or ineffective use of visual aids and modeling during the presentation	
<b>Class Handout</b> <i>2 points</i>	The class handout provides a useful and concise overview of the presentation for colleagues with appropriate references	The class handout provides an overview of the presentation for colleagues with appropriate references	There is no handout to accompany the presentation and / or the handout has no references	
<b>Presentation</b> <i>3 points</i>	The presentation is very engaging and informative. All group members participate equally	The presentation is engaging and informative. All group members participate equally	The presentation is not engaging and or informative and/or all group members do not participate equally	
<b>Total Points</b>				<b>/ 35</b>

**Lesson Plan Deconstruction (15 points) [ONLINE]**

	<b>Exceeds Expectation</b>	<b>Meets Expectations</b>	<b>Does Not Meet Expectations</b>	<b>Points and Comments</b>
<b>Standards</b>	Identifies state, national, and other standards within lesson and adds others; Notes appropriate grade level	Identifies some state, national, and other standards within lesson and adds others; Notes appropriate grade level	Identifies few state, national, or other standards within lesson or does not include appropriate additional standards; Does not note or gives inappropriate grade level	/3
<b>Skills</b>	Identifies skills that must be present before the lesson is taught and options for challenging or remediating as necessary.	Identifies some skills that must be present before the lesson is taught and options for challenging or remediating as necessary	Does not identify developmentally appropriate skills that must be present before the lesson is taught or does not identify or provide options for challenging or remediating	/3
<b>Adaptations</b>	Identifies adaptations for diverse learners and provides adaptations when missing	Identifies some adaptations for diverse learners and provides some adaptations when missing	Does not identify adaptations for diverse learners and/ or does not provide adaptations when missing	/3
<b>School-home</b>	Identifies plans for school-home communication and extension and provide ones where missing	Identifies plans for school-home communication and extension	Does not identify or provide plans for school- home communication and extension	/3
<b>Challenges and Solutions</b>	Identifies potential challenges to a successful lesson and provides adaptations or additional preparations	Identifies potential challenges to a successful lesson and provides adaptations of additional preparations	Does not identify potential challenges and/ or does not provide adaptations or additional preparations	/3
<b>Total Points</b>				/10

**Informal Assessment Video Analysis Evaluation Rubric [ONLINE]**

	<b>Exceeds Expectation</b>	<b>Meets Expectations</b>	<b>Does Not Meet Expectations</b>	<b>Points and Comments</b>
<b>Mastered Skills</b> <i>3 points</i>	Four mastered skills listed with detailed evidence	Four mastered skills listed with some evidence	Fewer than four mastered skills listed and/ or absence of evidence	
<b>Developing Skills</b> <i>3 points</i>	Three developing skills listed with detailed evidence	Three developing skills listed with some evidence	Fewer than three developing skills listed and/ or absence of evidence	
<b>Emergent Skills</b> <i>2 points</i>	Two emergent skills listed with detailed evidence	Two emergent skills listed with some evidence	Fewer than two emergent skills listed and/ or absence of evidence	
<b>Learning Objectives</b> <i>3 points</i>	Five measurable and specific learning objectives listed with clear links to the analysis of the student's knowledge and skills	Five measurable and learning objectives listed with some links to the analysis of the student's knowledge and skills	Fewer than five learning objectives and/or a lack of links to the analysis, not specific or not measurable	
<b>Lessons / Learning Activities</b> <i>5 points</i>	Detailed and complete descriptions of three lessons or learning experiences with clear links to the analysis	Complete descriptions of three lessons or learning experiences with links to the analysis	Fewer than three lessons and / or lack of detail without links to the analysis	
<b>Adaptations</b> <i>4 points</i>	Detailed and complete description of adaptations the teacher can provide to best meet the learning needs of the student based on his or her skills, knowledge, and interests	Complete description of adaptations the teacher can provide to best meet the learning needs of the student based on his or her skills, knowledge, and interests	Incomplete description of adaptations and/or adaptations are not based on the needs of the student and his or her skills, knowledge, and interests	
<b>Links to Course Readings</b> <i>5 points</i>	Strong evidence of incorporating at least two course readings to support the analysis (includes citations)	Evidence of incorporating at least two course readings to support the analysis (includes citations)	Limited or ineffective incorporation of course readings	
<b>Total Points</b>				<b>/ 25</b>

**Home- School Connections to Mathematics and Science (10 points) [ONLINE]**

	<b>Exceeds Expectation</b>	<b>Meets Expectations</b>	<b>Does Not Meet Expectations</b>	<b>Points and Comments</b>
<b>Directions</b>	Provides clear, parent friendly directions for family members to engage child in mathematics and/ or science development	Provides parent friendly directions for family members to engage child in mathematics and/ or science development	Provides limited or unclear directions to engage child in mathematics and/ or science development	/4
<b>Communication</b>	Provides opportunities and encouragement for parent-child- school communication	Provides limited opportunities or encouragement for parent-child- school communication	Provides limited or no opportunities or encouragement for parent-child- school communication	/4
<b>Readings</b>	Shows clear evidence of incorporating at least two readings (includes citations)	Shows some evidence of incorporating at least two readings (includes citations)	Limited or ineffective incorporation of course readings	/2
<b>Total Points</b>				/10

### Teaching Observation Analysis Evaluation Rubric

	<b>Exceeds Expectation</b>	<b>Meets Expectations</b>	<b>Does Not Meet Expectations</b>	<b>Points and Comments</b>
<b>Description of Lesson Content</b> <i>3 points</i>	Complete and detailed list of what occurred during the lesson including the subject area and grade level, standards utilized, concept(s) and/or process skills being taught, description of the activity, learning objectives, and relevant vocabulary	Complete list of what occurred during the lesson including the subject area and grade level, standards utilized, concept(s) and/or process skills being taught, description of the activity, learning objectives, and relevant vocabulary	Incomplete description of the lesson content that does not include all of the required information and/or uses inadequate detail	
<b>Description of Instructional Strategies</b> <i>3 points</i>	Complete and detailed list of the instructional strategies used, adaptations provided, links to family/community knowledge or children's interests, management procedures, assessments, questions asked by the teacher, and questions asked by the children	List of the instructional strategies used, adaptations provided, links to family/community knowledge or children's interests, management procedures, assessments, questions asked by the teacher, and questions asked by the children	Incomplete description of the instructional strategies used	
<b>Analysis of Teacher's Use of Specific Instructional Strategies</b> <i>6 points</i>	Detailed and complete analysis of the effectiveness of the teacher's use of instructional strategies related to vocabulary, adaptations, management, assessment, and questioning supported by evidence and course readings (include citations)	Analysis of the use of the effectiveness of the teacher's use of instructional strategies related to vocabulary, adaptations, management, assessment, and questioning supported by evidence and course readings (include citations)	Limited or incomplete analysis of the teacher's use of specific instructional strategies without or with limited support from evidence and course readings	
<b>Analysis of Overall Effectiveness</b> <i>4 points</i>	Comprehensive analysis of the effectiveness of the instructional strategies and those that were most and least effective supported by evidence and course readings (include citations)	Analysis of the effectiveness of the instructional strategies and those that were most and least effective supported by evidence and course readings (include citations)	Limited or incomplete analysis of the effectiveness of the instructional strategies, no discussion of the least and most effective strategies, and/or lack of support from evidence and course readings	
<b>Analysis of Changes to the Lesson</b> <i>4 points</i>	Thorough analysis of the needed changes to the lesson with detailed supports for why those changes are needed and would be beneficial for the students	Analysis of the needed changes to the lesson with detailed supports for why those changes are needed and would be beneficial for the students	Limited analysis of the needed changes to the lesson without supports or with limited supports for why those changes would be needed and/or beneficial for students	
<b>Reflection</b> <i>5 points</i>	A thoughtful and complete reflection on the implications of the observation and analysis for future practice that meaningfully incorporates course readings (include citations)	A complete reflection on the implications of the observation and analysis for future practice that meaningfully incorporates course readings (include citations)	A limited or incomplete reflection on the implications of the observation and analysis and/or that does not incorporate course readings	
<b>Total Points</b>				<b>/ 25</b>

**Good Games Through the Grades (10 points) [ONLINE]**

	<b>Exceeds Expectation</b>	<b>Meets Expectations</b>	<b>Does Not Meet Expectations</b>	<b>Points and Comments</b>
<b>Details</b>	Previews and lists five games and the approximate grade level targeted	Previews and lists less than five games or does not give approximate grade level targeted	Previews and lists less than five games and/ or does not list approximate grade level targeted	/2
<b>Rubric</b>	Develops comprehensive rubric with five to ten items for rating computer games	Develops rubric with five to ten items for rating computer games	Develops rubric of less than five to ten items for cursory items for rating computer games	/4
<b>Readings</b>	Shows clear evidence of incorporating readings into the evaluation rubric	Shows some evidence of incorporating readings into rating scale	Does not show evidence of incorporating readings into rating scale	/4
<b>Total Points</b>				/10

**Reflection for Year Long Planning (10 points) [ONLINE]**

	<b>Exceeds Expectation</b>	<b>Meets Expectations</b>	<b>Does Not Meet Expectations</b>	<b>Points and Comments</b>
<b>Reflection</b>	Shows clear evidence of reflection on own teaching practices in mathematics and science	Shows some evidence of reflection on own teaching practices in mathematics and science	Does not show evidence of reflection on own teaching practices in mathematics and science	/4
<b>Impact</b>	Discusses in detail impact on mathematics and science planning for the new year	Discusses the impact on mathematics and science planning for the new year	Does not discuss impact on mathematics and science planning for the new year	/3
<b>Readings</b>	Shows clear evidence of reflection on at least two class readings (include citations)	Shows some evidence of reflection on at least two class readings (include citations)	Limited or ineffective incorporation of course readings	/3
<b>Total Points</b>				/10

## Attachment 1: Teaching Observation Analysis

### **Description** (List or provide brief descriptions)

- Subject Area and Grade Level
- Standards Utilized (POS, SOL, or National Standards)
- Concept(s) and/or Process Skills Being Taught
- Brief Description of Activity
- Objectives (Individual and/or Group)
- Relevant Vocabulary
- Instructional Strategies Used
- Adaptations Provided for Groups of Students or Individual Students
- Links to Family/Community Knowledge or Children's Interests
- Management Procedures
- Assessments
- Questions Asked by the Teacher
- Questions Asked by the Children

### **Analysis** (Address each question with supports from the observation and course readings – provide citations)

- Evaluate the effectiveness of the teachers' use of strategies
  - To help students understand relevant vocabulary
  - To meet the learning needs of groups of students or individual students
  - To link to students' knowledge, interests, and backgrounds
  - To manage the students during the learning activity
  - To assess students' learning during the lesson
  - To use questions and address students' questions to promote student learning
- Overall, how effective and engaging was the lesson? Which instructional strategies were the most and least effective? Why?
- What changes would you make to the lesson and why?

### **Reflection**

- Describe the implications of the observation and analysis for your future mathematics or science instruction
