**College of Education and Human Development**  
**Elementary Education Program**

ELED 552 – Mathematics Methods for the Elementary Classroom (Hybrid)  
3 Credits Fall 2021  
THURS 4:30 pm - 7:10 pm  
Thompson Hall L019

### **Faculty**

Name: Dr. Jennifer Suh  
Office Hours:By Appointment  
Office Location:2401 Thompson Hall  
Office Phone:703-993 9119  
Email Address:jsuh4@gmu.edu

### **Prerequisites/Corequisites**

Admission to the elementary education licensure program.

### **University Catalog Course Description**

Introduces methods for teaching all children topics in arithmetic, geometry, algebra, probability, and statistics in elementary grades. Focuses on using manipulatives and technologies to explore mathematics and solve problems.

### **Course Overview**

In this course, we will begin an inquiry into mathematics teaching and learning that will guide you in your first teaching job and give you the tools that will enable you to continue to inquire and learn as part of your work as a teacher. Class sessions will be interactive and will include a variety of hands-on experiences with concrete and virtual manipulatives appropriate for elementary school mathematics. We will explore the teaching of mathematics, investigating both *what* to teach and *how* to teach it. We will explore what it means to do mathematics and what it means to understand mathematics through individual, small group, and large group mathematical problem solving. We will investigate ways to represent understandings of mathematical concepts, communicate reasoning about mathematical ideas, and construct mathematical arguments. We will investigate and read about ways children might represent mathematical concepts, looking at ways to help children build connections and see relationships among mathematical ideas. We will explore characteristics of a classroom environment conducive to mathematical learning by reading and discussing the importance of mathematical tasks, mathematical tools, the roles of teachers and students, and the assessment of mathematical understanding.

**Doing Mathematics** (Learning *for* practice): We will build our own *knowledge* of mathematics by closely investigating ideas in number sense and fraction concepts. Additionally, we will engage in

several math tasks, extending our knowledge of mathematics and students' thinking, which will provide the foundation for your professional decision-making.

**Examining Records of Practice** (Learning *from* practice): Records of practice—such as videotapes of lessons taught by yourself or others, students' work, and teachers' professional writing—allow us to investigate the work of teaching mathematics and improve our own practice.

**Trying Things Out** (Learning *in* practice): Because teaching involves more than just having knowledge, we want you to engage in *enacting* the practices we are investigating as much as possible, so that you are developing the skills and professional decision-making that will make you a successful teacher.

## Course Delivery Method

This course will be delivered online (76% or more) using a synchronous format via the Blackboard Learning Management system (LMS) housed in the MyMason portal. You will log in to the Blackboard (Bb) course site using your Mason email name (everything before @masonlive.gmu.edu) and email password. The course site will be available on May 30, 2020. Individual session formats vary and may include lecture, small group/large group discussion, hands-on, interactive work, student presentations, and cooperative learning. Practical applications of theory are explored in group activities.

**Under no circumstances, may candidates/students participate in online class sessions (either by phone or Internet) while operating motor vehicles. Further, as expected in a face-to-face class meeting, such online participation requires undivided attention to course content and communication.**

## Technical Requirements

To participate in this course, students will need to satisfy the following technical requirements:

- High-speed Internet access with standard up-to-date browsers. To get a list of Blackboard's supported browsers see:  
[https://help.blackboard.com/Learn/Student/Getting\\_Started/Browser\\_Support#supported-browsers](https://help.blackboard.com/Learn/Student/Getting_Started/Browser_Support#supported-browsers)
- To get a list of supported operating systems on different devices see:  
[https://help.blackboard.com/Learn/Student/Getting\\_Started/Browser\\_Support#tested-devices-and-operating-systems](https://help.blackboard.com/Learn/Student/Getting_Started/Browser_Support#tested-devices-and-operating-systems)
- Students must maintain consistent and reliable access to their GMU email and Blackboard, as these are the official methods of communication for this course.
- Students will need a headset microphone for use with the Blackboard Collaborate web conferencing tool. [Delete this sentence if not applicable.]
- Students may be asked to create logins and passwords on supplemental websites and/or to download trial software to their computer or tablet as part of course requirements.
- The following software plug-ins for PCs and Macs, respectively, are available for free download: [Add or delete options, as desire.]

- o Adobe Acrobat Reader: <https://get.adobe.com/reader/>
- o Windows Media Player: <https://support.microsoft.com/en-us/help/14209/get-windows-media-player>
- o Apple Quicktime Player: [www.apple.com/quicktime/download/](http://www.apple.com/quicktime/download/)

## Expectations

- Course Week: Our course week will begin on the day that our synchronous meetings take place as indicated on the Schedule of Classes.

- Log-in Frequency:

Students must actively check the course Blackboard site and their GMU email for communications from the instructor, class discussions, and/or access to course materials at least 4 times per week. In addition, students must log-in for all scheduled online synchronous meetings.

- Participation:

Students are expected to actively engage in all course activities throughout the semester, which includes viewing all course materials, completing course activities and assignments, and participating in course discussions and group interactions.

- Technical Competence:

Students are expected to demonstrate competence in the use of all course technology. Students who are struggling with technical components of the course are expected to seek assistance from the instructor and/or College or University technical services.

- Technical Issues:

Students should anticipate some technical difficulties during the semester and should, therefore, budget their time accordingly. Late work will not be accepted based on individual technical issues.

- Workload:

Please be aware that this course is **not** self-paced. Students are expected to meet *specific deadlines* and *due dates* listed in the **Class Schedule** section of this syllabus. It is the student's responsibility to keep track of the weekly course schedule of topics, readings, activities and assignments due.

- Instructor Support:

Students may schedule a one-on-one meeting to discuss course requirements, content or other course-related issues. Those unable to come to a Mason campus can meet with the instructor via telephone or web conference. Students should email the instructor to schedule a one-on-one session, including their preferred meeting method and suggested dates/times.

- Netiquette:

The course environment is a collaborative space. Experience shows that even an innocent remark typed in the online environment can be misconstrued. Students must always re-read their responses carefully before posting them, so that others do not consider them as personal offenses. *Be positive in your approach with others and diplomatic in selecting your words.* Remember that you are not competing with classmates, but sharing information and learning from others. All faculty are similarly expected to be respectful in all communications.

- Accommodations:

Online learners who require effective accommodations to insure accessibility must be registered with George Mason University Disability Services.

## Learner Outcomes or Objectives

This course is designed to enable students to do the following:

- A. Know what constitutes the essential topics in mathematics of the modern early and intermediate grades school program.
- B. Identify and use selected manipulatives and technology such as linking cubes, attribute blocks, geoboards, base-10 blocks, fraction circles, tangrams, calculators, and computers to teach appropriate mathematics content topics in the early and middle grades.
- C. Identify and use various instructional strategies and techniques (cooperative and peer group learning, activity centers, laboratories and workshops, teacher-directed presentations, etc.) to teach mathematical content topics appropriate for the early and intermediate grades to all children, including those from non-mainstreamed populations.
- D. Identify and use alternative methods for assessing students' work in mathematics in the early and intermediate grades.
- E. Solve problems in the mathematical content areas of logic, number theory, geometry, algebra, probability, and statistics appropriate for adaptation to the early and intermediate grades.
- F. Know and explain the learning progression in relation to the standards-based mathematics curriculum, the key elements of the National Council of Teachers of Mathematics Principles and Standards for School Mathematics, and the key elements of the Virginia Standards of Learning for Mathematics.
- G. Understand the multiple representations of mathematical concepts and procedures.
- H. Understand and use the five processes—reasoning mathematically, solving problems, communicating mathematics effectively, making mathematical connections, and using mathematical representations—at different levels of complexity
- I. Explore the contributions of different cultures toward the development of mathematics, and the role of mathematics in culture and society.
- J. Understand the relationship of math to science, the design process, and technology.
- K. Understand, possess, and integrate the knowledge, skills, dispositions, and processes needed to support learners' achievement in an interdisciplinary manner in Virginia's Foundation Blocks for Early Learning: Comprehensive Standards for Four-Year-Olds and the Virginia Standards of Learning in English, mathematics, history and social science, science, and computer technology.

Additionally, this course supports the CEHD Core Values of collaboration, ethical leadership, research-based practice, social justice, and innovation. Statements of these goals are at <http://cehd.gmu.edu/values/>.

## Professional Standards (Interstate Teacher Assessment and Support Consortium (InTASC))

Upon completion of this course, students will have met the following professional standards:

| Course Student Outcomes (above)                                 | INTASC Standard (2013) |
|---|------------------------|
| A Essential math  | #4                     |
| B Planning and Teaching using manipulatives                     | #7                     |
| C Instructional Strategies                                      | #8                     |
| D Assessing   | #6                     |
| E Problem Solving   | #5                     |
| F Learner Development and understanding of Learning Progression | #2/#1                  |

| Course & PBA                                    | INTASC   |
|---|--|
| <b>552 Math</b><br>Student Assessment Interview | #4 Content Knowledge<br>#1 & #2 Learner Development & Differences<br>#6 Assessment |

### Required Texts

Van De Walle, J., Karp, K. S., & Bay-Williams, J. M. (2018). *Elementary and Middle School Mathematics: Teaching Developmentally*. (10th edition) New York: Pearson(2019:9780134802084)

### Course Performance Evaluation

Students are expected to submit all assignments on time in the manner outlined by the instructor (e.g., Blackboard)

### Professional Dispositions

Professional dispositions are to be displayed at all times while interacting with the instructor and other students. Cell phones are not to be used during class. Laptops are to be used for instructional purposes only.

- **Assignments and Examinations**

### **Daily Participation, Interactive Math Memo (30 points)**

*Addresses Learner Outcomes: A, B, C, D, E, F*

Reading and activity reflections will be done via Math Memo Reflection entries. First session, we will start with the Math Autobiography & Surveys and the last class we will have a final vision statement and post survey on Teaching practices. In class, students are expected to keep an interactive math memo where one can analyze and reflect on solution strategies, provide differentiated approaches to center activities, and actively participate in class discussions by applying field experiences and class readings.

### **Math Routine Rehearsal (10 points)**

*Addresses Learner Outcomes: A, B, C, D, E, F*

You are required to plan, teach, and complete reflection for a Math Routine taught to your classmates during the course, and to your students in your field assignment. A Math Routine lesson plan template will be provided, to which you will add your anticipated student responses and your expected series of questions.

- **Group rehearsal for Math Routine:** The first Math Routine will be taught by a group and presented to your classmates. Each group is expected to: 1) prepare any materials needed for the Math Routine; 2) anticipate possible student responses to the problems presented and plan your expected sequence of follow-up questions; See rubric/Blackboard for more detail.

### **\*Teaching with Technology enhanced Math Lesson & Modules (20 points)**

The set of modules will prepare you for a lesson that integrates mathematics technology. This lesson is enacted in your field and can be one that is co-planned with your classroom CF. It includes the lesson plan, reflection, anticipated student responses/work samples. Share a ppt with sample artifacts from teaching in class share-out. The lesson will have a component of technology integration that can be whole group, small group or station/center activity.

Reflection will include how the candidate focused on promoting equitable participation and meaningful and rigorous learning for each and every child to promote digital equity.

### **\*Learning Trajectory Report : Formative Assessment with Sequenced Instructional Activities (with an individual or small group) Course Performance Based Assessment (40points)**

*Addresses Learner Outcomes: A, B, C, D, F*

In order to plan effective instruction, you will need to know how to assess children's knowledge of mathematical concepts. One way to assess children's thinking is a diagnostic assessment. This assignment has 4 parts:

Part 1. Description of the Learning Trajectory/Progression with a visual of LT concept map (~5 pages)

Part 2. Administer a Quick Formative Assessment with a small group or individual with screenshots of student work on the formative assessment (~5 pages)

Part 3. Learning Goal and Instructional Activities with screenshots of learning activity sequence and sample work (~5 pages with screen shots of activities)

Part 4. Reflection and Share out (1-2 pages) and be ready to share with a brief set of slides

- **Other Requirements**

- **Attendance:** It is your responsibility to attend all class sessions. You are held accountable for all information from each class session whether you are present or not. Reasons for any absence must be reported to the instructor in writing.
- **Tardiness:** It is your responsibility to be on time for each class session. Reasons for any absence must be reported to the instructor in writing.

*Note: Faculty reserve the right to add, alter, or omit any assignment as necessary during the course of the semester. You will always receive advanced notice of any modifications.*

- **Course Performance Evaluation Weighting**

The assignments across the semester are intended to further your understanding of what it means to teach, learn, and assess mathematics in light of current reforms in mathematics education. All assignments are to be turned in to your instructor on time.

All assignments are to be completed by the date listed in the syllabus. Written work will not be accepted after the due date unless prior arrangements have been made with the instructor

Late work will not be accepted for full credit. If the student makes prior arrangements with the instructor, assignments turned in late will receive a 10% deduction from the grade per late day or any fraction thereof (including weekends and holidays).

- **Grading Policies**

The mathematics education courses in GSE's Elementary Education Program integrate pedagogy and mathematics content appropriate for the elementary school grades. For students to earn a grade of A in the course, they must demonstrate excellence in *both* the pedagogical knowledge and the content knowledge of the mathematics appropriate at their level of teaching. Thus, the grading in the course is structured to help evaluate student excellence in both areas. Problem sets and assessment work focuses primarily on ascertaining student excellence in handling mathematics content appropriate for the elementary grades, and represents 50% of students' grades. Pedagogical knowledge is

ascertained primarily from readings, assignments and participation in the course, and represents 50% of students' grades. Therefore, students who demonstrate excellence in both pedagogical knowledge and content knowledge receive grades of A.

At George Mason University course work is measured in terms of quantity and quality. A credit normally represents one hour per week of lecture or recitation or not fewer than two hours per week of laboratory work throughout a semester. The number of credits is a measure of quantity. The grade is a measure of quality. The university-wide system for grading graduate courses is as follows:

| Grade | GRADING | Grade Points | Interpretation   |
|-------|---------|--------------|--|
| A     | 94-100  | 4.00         | Represents mastery of the subject through effort beyond basic requirements.                        |
| A-    | 90-93   | 3.67         |  |
| B+    | 85-89   | 3.33         | Reflects an understanding of and the ability to apply theories and principles at a basic level     |
| B     | 80-84   | 3.00         |  |
| C*    | 70-79   | 2.00         | Denotes an unacceptable level of understanding and application of the basic elements of the course |
| F*    | <69     | 0.00         |  |

Note: "C" is not satisfactory for a licensure course.

"F" does not meet requirements of the Graduate School of Education

## Professional Dispositions

Students are expected to exhibit professional behaviors and dispositions at all times. (See Elementary Education Program Handbook).

## Core Values Commitment

The College of Education and Human Development is committed to collaboration, ethical leadership, innovation, research-based practice, and social justice. Students are expected to adhere to these principles: <http://cehd.gmu.edu/values/>.

## GMU Policies and Resources for Students

### *Policies*

- Students must adhere to the guidelines of the Mason Honor Code (see <http://oai.gmu.edu/the-mason-honor-code/>).
- Students must follow the university policy for Responsible Use of Computing (see <http://universitypolicy.gmu.edu/policies/responsible-use-of-computing/>).
- Students are responsible for the content of university communications sent to their Mason email account and are required to activate their account and check it regularly. All communication from the university, college, school, and program will be sent to students **solely** through their Mason email account.
- Students with disabilities who seek accommodations in a course must be registered with George Mason University Disability Services. Approved accommodations will begin at the time the written letter from Disability Services is received by the instructor (see <http://ods.gmu.edu/>).
- Students must follow the university policy stating that all sound emitting devices shall be silenced during class unless otherwise authorized by the instructor.

### *Campus Resources*

- Support for submission of assignments to Tk20 should be directed to [tk2ohelp@gmu.edu](mailto:tk2ohelp@gmu.edu) or <https://cehd.gmu.edu/aero/tk20>. Questions or concerns regarding use of Blackboard should be directed to <http://coursessupport.gmu.edu/>.
- The Writing Center provides a variety of resources and services (e.g., tutoring, workshops, writing guides, handbooks) intended to support students as they work to construct and share knowledge through writing (see <http://writingcenter.gmu.edu/>).
- The Counseling and Psychological Services (CAPS) staff consists of professional counseling and clinical psychologists, social workers, and counselors who offer a wide

range of services (e.g., individual and group counseling, workshops and outreach programs) to enhance students' personal experience and academic performance (see <http://caps.gmu.edu/>).

- The Student Support & Advocacy Center staff helps students develop and maintain healthy lifestyles through confidential one-on-one support as well as through interactive programs and resources. Some of the topics they address are healthy relationships, stress management, nutrition, sexual assault, drug and alcohol use, and sexual health (see <http://ssac.gmu.edu/>). Students in need of these services may contact the office by phone at 703-993-3686. Concerned students, faculty and staff may also make a referral to express concern for the safety or well-being of a Mason student or the community by going to <http://ssac.gmu.edu/make-a-referral/>.
- **Notice of mandatory reporting of sexual assault, interpersonal violence, and stalking:** As a faculty member, I am designated as a "Responsible Employee," and must report all disclosures of sexual assault, interpersonal violence, and stalking to Mason's Title IX Coordinator per University Policy 1202. If you wish to speak with someone confidentially, please contact one of Mason's confidential resources, such as Student Support and Advocacy Center (SSAC) at [703-380-1434](tel:703-380-1434) or Counseling and Psychological Services (CAPS) at [703-993-2380](tel:703-993-2380). You may also seek assistance from Mason's Title IX Coordinator by calling [703-993-8730](tel:703-993-8730), or emailing [titleix@gmu.edu](mailto:titleix@gmu.edu).
- For information on student support resources on campus, see <https://ctfe.gmu.edu/teaching/student-support-resources-on-campus>
- For additional information on the College of Education and Human Development, please visit our website <http://cehd.gmu.edu/>.

**For additional information on the College of Education and Human Development, please visit our website <https://cehd.gmu.edu/>.**

**Course Materials and Student Privacy:**

- All course materials posted to Blackboard or other course site are private; by federal law, any materials that identify specific students (via their name, voice, or image) must not be shared with anyone not enrolled in this class.
- Video recordings of class meetings that include audio or visual information from other students are private and must not be shared.
- Live Video Conference Meetings (e.g. Collaborate or Zoom) that include audio or visual information from other students must be viewed privately and not shared with others in your household.
- Some/All of your CEHD synchronous class meetings may be recorded by your instructor to provide necessary information for students in this class. Recordings will be stored on Blackboard [or another secure site] and will only be accessible to students taking this course during this semester.

## Assessment Rubric(s)

### Learning Trajectory Assessment Project

George Mason University College of Education and Human Development <sup>[1]</sup><sub>[SEP]</sub> Elementary Education Program

In the Elementary Education program, the **Learning Trajectory Assessment Project** is completed during EDCI 552 and is assessed by the instructor. The candidate must earn a score of 3 to be successful on this assignment. If a student does not earn a 3 on the assignment, they must meet with the course instructor or assessor prior to resubmitting. The data from this assessment are used to identify both best practice and identified gaps in developing and assessing a specific lesson plan to impact on individual learning.

#### STANDARDS

- **InTASC Standards:** 1, 2, 5, 6, 7, 8
- **CAEP Standards:** 1.1, 1.3, 1.4, 1.5
- **VDOE Standards:** 1, 2, 3, 4, 5

Standard #1: Learner Development. The teacher understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.)

INTASC Standard #2: Learning Differences. The teacher uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards)

Standard #4: Content Knowledge. The teacher understands the central concepts, tools of inquiry, and structures of the discipline(s) he or she teaches and creates learning experiences that make the discipline accessible and meaningful for learners to assure mastery of the content.

Standard #5: Application of Content. The teacher understands how to connect concepts and use differing perspectives to engage learners in critical thinking, creativity, and collaborative problem solving related to authentic local and global issues

InTASC Standard #6 Assessment. The teacher understands and uses multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision making

Standard #7: Planning for Instruction. The teacher plans instruction that supports every student in meeting rigorous learning goals by drawing upon knowledge of content areas, curriculum, cross-disciplinary skills, and pedagogy, as well as knowledge of learners and the community context.

Standard #9: Professional Learning and Ethical Practice. The teacher engages in ongoing professional learning and uses evidence to continually evaluate his/her practice, particularly the effects of his/her choices and actions on others (learners, families, other professionals, and the community), and adapts practice to meet the needs of each learner.

#### THEMES

-  **Technology**
-  **Diversity**
-  **College & Career Ready**

#### ASSESSMENT OBJECTIVES

- The candidate will use knowledge of individual learning differences and assessment to develop an instructional plan for a learner with developmental, learning, physical or linguistic differences.

- The candidate will develop an assessment of learner progress.

## RATIONALE

Lesson planning is an essential skill for an educator. A lesson plan is a road map for instruction. When planning teachers and teacher candidates need to answer four main questions:

- Who are my learners? (Context/Learner Needs)
- What do the learners need to know and be able to do? (Objectives/Goals)
- How will I get all learners to know and do the new tasks? (Teaching and learning strategies)
- How will I know the learning objectives were achieved? (Goals/Outcomes/Assessments)

The first step in planning is aligning the learning objectives with the goals/outcomes/assessments for the lesson. This should include considerations based on learner abilities, challenges, and prior knowledge. Before developing specific learning activities, determine how you will assess if learners have met the lesson objectives. Once you know how you will assess learning, you can develop activities that align instruction with the assessment. Additionally, a teacher must consider learner prior knowledge, how to differentiate to meet learner needs, and how to do so within the time allotted. Lesson plans include pacing, transitions, checking for understanding, and ideas for re-teaching or extending learning based upon learner needs.

The planning process is the same whether you are planning a lesson for a class or for an individual. For this assessment you will develop an instructional plan for a learner with developmental, learning, physical or linguistic differences, including a plan for assessing the learner's progress.

## ASSESSMENT DIRECTIONS

Candidates will develop an individualized plan for a child with a learning trajectory in mind. The individualized instruction and assessment plan should include the following sections:

**Part 1. Description of the Learning Trajectory/Progression** (3-5 pages) using your text, the learning progression document and other research around learning progression, describe the learning progression around your specific math concept. The candidate includes descriptions with specific examples from the research literature.

### **DUE Session 5**

**1a. Description of the learning trajectory/progression.** Summarize the research around the learning progression around the topic chosen. Create a concept map to illustrate the big ideas and scaffolding concepts.

**1b. Description of common teaching and learning strategies.** What are some of the common teaching strategies and the ways in which students develop the skills and understandings?

**1c. Description of Common student conceptions: Specific** references are made about common conceptions and misconceptions one might attend to, based on the research on the learner development using the text and progression document.

**Connection:** Now based on the LT research, **Select a [Formative Assessment](#) with multiple representations.**

## Part 2. Administer a Quick Formative Assessment with a small group or individual (3-5 pages)

### Due Session 10

- 2a. **Conduct the Formative Assessment with multiple representations.** Uses multiple and appropriate types of assessment tasks that uses multiple representations including pictorial, numeric, verbal and hands on manipulatives to assess student thinking
- 2b. **Pose purposeful questions to Assess student's mathematical understanding** Administer the assessment with prepared questions that gathers information about student's interest, background and cultural information as well as specific questions linked to the tasks that probes thinking, and makes math visible.
- 2c. **Include a report of the assessment with student work-** What kinds of mathematics proficiency strengths do students in your class exhibit? What do the students look or sound like when they are exhibiting these strengths? Consider the following proficiencies: • Conceptual Understanding • Procedural Fluency • Strategic Competence • Adaptive Reasoning • Productive Disposition

**Connection:** Now based on the formative assessment data, think about learning goals and instructional activities will you recommend

**Part 3. Learning Goal and Instructional Activities (3- 5 pages)** . As TC describes data from part 2, the teacher candidate sets a learning goal and identifies a set of activities that will advance the learner along the developmental learning trajectory.

### Due Session 13

- 3a. Learning Goal** (aka: target, benchmark, expectation). What should they learn? Identify learning goals within the learning progression and develop a rationale that supports why the objectives/goals are meaningful learning outcomes. (Virginia Standards of Learning (SOLs), College-and-Career-Ready skills, and other content specific objectives should be included in lesson plans.)
- 3b. Design and try a sequence of activities matched to each of the levels of thinking in that path to advance the student's understanding.** Describe at least three evidence-based instructional strategies that address the identified learning objectives/goals. Try one of the bridging activities and present how the activity advanced student thinking. Reflect on the learners' developmental skills using student work and verbal explanation..
- 3c. Developmental path along which children develop to reach that goal.** Provide a rationale for instructional adaptations and accommodations needed. Write a plan for the assessment(Look fors) and documentation of the learners' progress toward the identified objectives/goals.

**Connection:** Reflect on how part 1's LT research aligns with the overall assessment of the student understanding of this concept.

**Part 4. Reflection and Share out** (1-2 pages) and be ready to share with a brief set of slides

### Due Session 15

**How did the assessment and the bridging activities help you understand the student's learning trajectory and where he or she is within the learning progression?**

What did you learn about learning trajectories? Reflect on your questioning skills? Did you plan for a variety of questions (i.e. gathering, probing, making math visible, reflecting & justifying questions)?What might you learn about how children learn mathematics from this assessment?How might a teacher use the diagnostic mathematics assessment to assess children?

## Math Teaching with Tech-knowledge: Transformative Digital Technology for Equity

| <i>Transformative Digital Technology for Equity</i>  | Question Prompts to Center Equitable TPACK   |
|--|--|
| Dimension 1: Access- Provide access to dynamic tools that support <i>inquiry</i> , discovery, and access to deep mathematical sense-making   | In what way does the choice of technology tool foster mathematical sense-making and allow equitable access for every learner?                              |
| Dimension 2: Identity- Promote authorship and student agency that promote equitable structures and participation of each <i>individual</i>   | In what way does the digital tool allow student ownership and authorship to build positive mathematical identities?  |
| Dimension 3: Formative Assessment- <i>Differentiate</i> instruction with presentation tools containing teacher dashboards and quick scan features to offer real-time feedback and scaffolding  | In what way does the digital tool promote formative assessment and differentiation to meet learners' needs?  |
| Dimension 4: Collective Thinking- Empower students by distributing authority and honoring all student ideas through collaboration, communication, and connection for <i>social</i> interaction | In what way does the digital tool affirm multiple ideas and empower students to collaborate, communicate and build collective knowledge among their peers? |
| Dimension 5: Amplification of Mathematical and Cognitive Processes- Amplify the mathematical processes with fidelity (Zbiek et al., 2007) using technology-mediated features                   | In what way do the features of the digital tool amplify mathematical or cognitive processes?   |

Class schedule: These topics and activities are subject to change to be responsive to the pace of the course.

ELED 552-001 – Mathematics Methods for the Elementary Classroom

**Doing Mathematics** (Learning *for* practice): We will build our own *knowledge* of mathematics by closely investigating ideas in number sense and fraction concepts. Additionally, we will engage in several math tasks, extending our knowledge of mathematics and students' thinking, which will provide the foundation for your professional decision-making.

**Examining Records of Practice** (Learning *from* practice): Records of practice—such as videotapes of lessons taught by yourself or others, students' work, and teachers' professional writing—allow us to investigate the work of teaching mathematics and improve our own practice.

**Trying Things Out** (Learning *in* practice): Because teaching involves more than just having knowledge, we want you to engage in *enacting* the practices we are investigating as much as possible, so that you are developing the skills and professional decision-making that will make you a successful teacher.

| Assignments   | Point     |
|---|-----------|
| <b>Math Daily Participation, Memo and Activities</b>  | 30 points |
| <b>Math Routine Rehearsal</b>   | 10 points |
| <b>Technology Enhanced Lesson Module with Student Work Analysis</b>                               | 20 points |
| <b>Learning Trajectory Assessment Report:<br/>Course Performance Based Assessment (40 points)</b> | 40 points |

## **Mathematical Process Goals for Students**

The content of the mathematics standards is intended to support the following five process goals for students: becoming mathematical problem solvers, communicating mathematically, reasoning mathematically, making mathematical connections, and using mathematical representations to model and interpret practical situations. Practical situations include real-world problems and problems that model real-world situations.

### **Mathematical Problem Solving**

Students will apply mathematical concepts and skills and the relationships among them to solve problem situations of varying complexities. Students also will recognize and create problems from real-world data and situations within and outside mathematics and then apply appropriate strategies to determine acceptable solutions. To accomplish this goal, students will need to develop a repertoire of skills and strategies for solving a variety of problem types. A major goal of the mathematics program is to help students apply mathematics concepts and skills to become mathematical problem solvers.

### **Mathematical Communication**

Students will communicate thinking and reasoning using the language of mathematics, including specialized vocabulary and symbolic notation, to express mathematical ideas with precision. Representing, discussing, justifying, conjecturing, reading, writing, presenting, and listening to mathematics will help students to clarify their thinking and deepen their understanding of the mathematics being studied. Mathematical communication becomes visible where learning involves participation in mathematical discussions.

### **Mathematical Reasoning**

Students will recognize reasoning and proof as fundamental aspects of mathematics. Students will learn and apply inductive and deductive reasoning skills to make, test, and evaluate mathematical statements and to justify steps in mathematical procedures. Students will use logical reasoning to analyze an argument and to determine whether conclusions are valid. In addition, students will use number sense to apply proportional and spatial reasoning and to reason from a variety of representations.

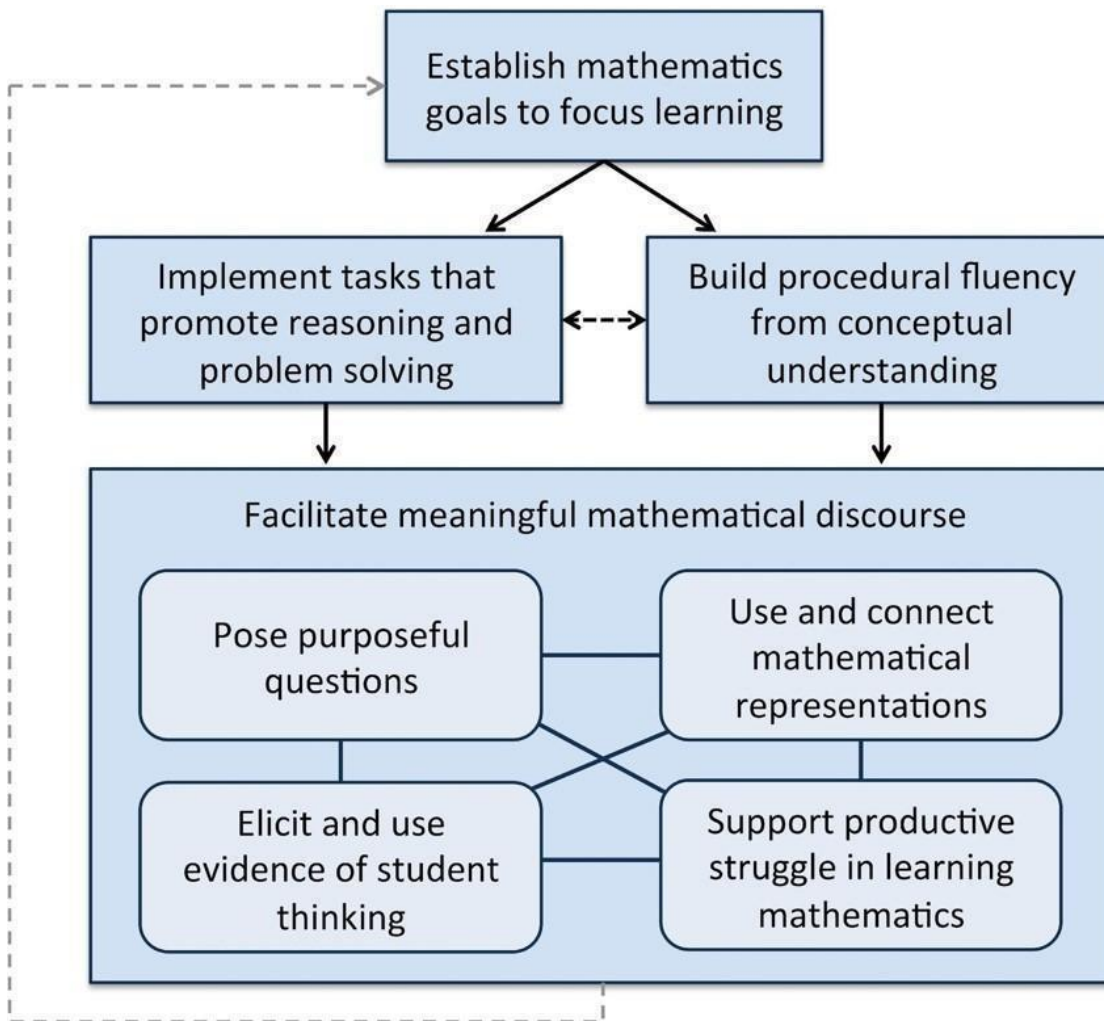

### **Mathematical Connections**

Students will build upon prior knowledge to relate concepts and procedures from different topics within mathematics and see mathematics as an integrated field of study. Through the practical application of content and process skills, students will make connections among different areas of mathematics and between mathematics and other disciplines, and to real-world contexts. Science and mathematics teachers and curriculum writers are encouraged to develop mathematics and science curricula that support, apply, and reinforce each other.

### **Mathematical Representations**

Students will represent and describe mathematical ideas, generalizations, and relationships using a variety of methods. Students will understand that representations of mathematical ideas are an essential part of learning, doing, and communicating mathematics. Students should make connections among different representations – physical, visual, symbolic, verbal, and contextual – and recognize that representation is both a process and a product.

# NCTM 8 Teaching Practices

## Mathematics Teaching Practices: Supporting Equitable Mathematics Teaching

| Mathematics Teaching Practices   | Equitable Teaching   |
|--|--|
| <p><b>Establish mathematics goals to focus learning.</b> Effective teaching of mathematics establishes clear goals for the mathematics that students are learning, situates goals within learning progressions, and uses the goals to guide instructional decisions.</p>   | <ul style="list-style-type: none"> <li>● Establish learning progressions that build students’ mathematical understanding, increase their confidence, and support their mathematical identities as doers of mathematics.</li> <li>● Establish high expectations to ensure that each and every student has the opportunity to meet the mathematical goals.</li> <li>● Establish classroom norms for participation that position each and every student as a competent mathematics thinker.</li> <li>● Establish classroom environments that promote learning mathematics as just, equitable, and inclusive.</li> </ul> |
| <p><b>Implement tasks that promote reasoning and problem solving.</b> Effective teaching of mathematics engages students in solving and discussing tasks that promote mathematical reasoning and problem solving and allow multiple entry points and varied solution strategies.</p>                             | <ul style="list-style-type: none"> <li>● Engage students in tasks that provide multiple pathways for success and that require reasoning, problem solving, and modeling, thus enhancing each student’s mathematical identity and sense of agency.</li> <li>● Engage students in tasks that are culturally relevant.</li> <li>● Engage students in tasks that allow them to draw on their funds of knowledge (i.e., the resources that students bring to the classroom, including their home, cultural, and language experiences).</li> </ul>  |
| <p><b>Build procedural fluency from conceptual understanding.</b> Effective teaching of mathematics builds fluency with procedures on a foundation of conceptual understanding so that students, over time, become skillful in using procedures flexibly as they solve contextual and mathematical problems.</p> | <ul style="list-style-type: none"> <li>● Connect conceptual understanding with procedural fluency to help students make sense of mathematics and develop a positive disposition toward mathematics.</li> <li>● Connect conceptual understanding with procedural fluency to reduce mathematical anxiety and position students as mathematical knowers and doers.</li> <li>● Connect conceptual understanding with procedural fluency to provide students with a wider range of options for entering a task and building mathematical meaning.</li> </ul>  |

|   |  |
|---|--|
| <p><b>Facilitate meaningful mathematical discourse.</b> Effective teaching of mathematics facilitates discourse among students to build shared understanding of mathematical ideas by analyzing and comparing student approaches and arguments.</p>                                   | <ul style="list-style-type: none"> <li>● Use discourse to elicit students' ideas and strategies and create space for students to interact with peers to value multiple contributions and diminish hierarchical status among students (i.e., perceptions of differences in smartness and ability to participate).</li> <li>● Use discourse to attend to ways in which students position one another as capable or not capable of doing mathematics.</li> <li>● Make discourse an expected and natural part of mathematical thinking and reasoning, providing students with the space and confidence to ask questions that enhance their own mathematical learning.</li> <li>● Use discourse as a means to disrupt structures and language that marginalize students.</li> </ul> |
| <p><b>Pose purposeful questions.</b> Effective teaching of mathematics uses purposeful questions to assess and advance students' reasoning and sense making about important mathematical ideas and relationships.</p>   | <ul style="list-style-type: none"> <li>● Pose purposeful questions, then listen to, and understand students' thinking to signal to students that their thinking is valued and makes sense.</li> <li>● Pose purposeful questions to assign competence to students. Verbally mark students' ideas as interesting or identify an important aspect of students' strategies to position them as competent.</li> <li>● Be mindful of the fact that the questions that a teacher asks a student and how the teacher follows up on the student's response can support the student's development of a positive mathematical identity and sense of agency as a thinker and doer of mathematics.</li> </ul>   |
| <p><b>Use and connect mathematical representations.</b> Effective teaching of mathematics engages students in making connections among mathematical representations to deepen understanding of mathematical concepts and procedures and to use them as tools for problem solving.</p> | <ul style="list-style-type: none"> <li>● Use multiple representations so that students draw on multiple resources of knowledge to position them as competent.</li> <li>● Use multiple representations to draw on knowledge and experiences related to the resources that students bring to mathematics (culture, contexts, and experiences).</li> <li>● Use multiple representations to promote the creation and discussion of unique mathematical representations to position students as mathematically competent.</li> </ul>  |
| <p><b>Elicit and use evidence of student thinking.</b> Effective teaching of mathematics uses evidence of student thinking to assess progress toward mathematical understanding and to adjust instruction continually in ways that support and extend learning.</p>                   | <ul style="list-style-type: none"> <li>● Elicit student thinking and make use of it during a lesson to send positive messages about students' mathematical identities.</li> <li>● Make student thinking public, and then choose to elevate a student to a more prominent position in the discussion by identifying his or her idea as worth exploring, to cultivate a positive mathematical identity.</li> <li>● Promote a classroom culture in which mistakes and errors are viewed as important reasoning opportunities, to encourage a wider range of students to engage in mathematical discussions with their peers and the teacher.</li> </ul>   |

**Support productive struggle in learning mathematics.**

Effective teaching of mathematics consistently provides students, individually and collectively, with opportunities and supports to engage in productive struggle as they grapple with mathematical ideas and relationships.

- Allow time for students to engage with mathematical ideas to support perseverance and identity development.
- Hold high expectations, while offering just enough support and scaffolding to facilitate student progress on challenging work, to communicate caring and confidence in students.

Great resources at your fingertip: (As you work on your assignment, the intent is that you also deepen your math knowledge for teaching and learn about important resources for teaching and learning)

a) Van de Walle et al., Text as a resource

b) Curriculum Framework document (standards unpacked with essential knowledge and skills)

[https://www.doe.virginia.gov/testing/sol/standards\\_docs/mathematics/index.shtml](https://www.doe.virginia.gov/testing/sol/standards_docs/mathematics/index.shtml)

c) Math Instructional Plans (suggested instructional plans for each standard)

[https://www.doe.virginia.gov/testing/sol/standards\\_docs/mathematics/2016/mip/index.shtml](https://www.doe.virginia.gov/testing/sol/standards_docs/mathematics/2016/mip/index.shtml)

d) Common Core Learning Progression Document (provides a lot of info on development and progression of standards)
