

**George Mason University  
College of Education and Human Development  
Early Childhood Education**

ECED 515.002 Mathematics for Diverse Young Learners  
3 Credits, Spring 2023, Bichronous In-person  
1/23/2023-3/12/2023, Thursdays/ 5:30-8:10 pm  
Thompson Hall L019, Fairfax Campus

**Faculty**

Name: Carley Fisher-Maltese, PhD  
Office Hours: By Appointment  
Office Location: Thompson Hall 1251, Fairfax Campus  
Office Phone: 703-993-4848  
Email Address: [cfisher@gmu.edu](mailto:cfisher@gmu.edu)

**Required Prerequisites**

ECED 401 or 501 and ECED 403 or 503

Prerequisites require a minimum grade of C for undergraduate courses and B- for graduate courses.

**University Catalog Course Description**

Examines ways to foster development of mathematics in preschool to third-grade children. Covers construction of mathematics lessons and hands-on experiences that promote learning in children with diverse abilities and cultural and linguistic backgrounds.

**Course Overview**

This class focuses on scholarly inquiry, where students learn about the recursive process of scholarly inquiry through studying previous scholarship and applying it to teaching and learning. In this course, students will analyze and evaluate quantitative and qualitative research focused on a specific question related to providing instruction that enhances young learners' mathematical understandings. Students will do the following:

- Articulate a question, problem, or challenge that is generally relevant and appropriate in scope (e.g., Why is teaching patterning important? What are effective approaches to teaching patterning to diverse prekindergartners?).
- Identify ethical issues related to using existing research to inform mathematics instruction and ethical considerations when working with young children.
- Communicate knowledge about evidence-based practices gathered from peer-reviewed research articles by writing a research brief to share with classmates.

**Course Delivery Method**

This course will be delivered using a lecture/discussion format and Blackboard (Bb).

**Learner Outcomes or Objectives**

This course is designed to enable students to do the following:

1. Explain how previous mathematics content coursework has developed understandings of

mathematics content identified in *Virginia's Early Learning and Development Standards* and the *Virginia Mathematics Standards of Learning* and explain how these standards provide a sound foundation for teaching mathematics in prekindergarten through third grade.

2. Discuss the contributions of different cultures toward the development of mathematics and the role of mathematics in culture and society.
3. Describe the role of family and community knowledge, experience, and resources in planning and implementing mathematics content in the curriculum.
4. Explain the sequential nature and vertical progression of mathematics and the multiple representations of mathematical concepts and procedures.
5. Use the five processes: reasoning mathematically, solving problems, communicating mathematics effectively, making mathematical connections, and using mathematical models and representations at different levels of complexity.
6. Plan instruction guided by the *Virginia's Early Learning and Development Standards*, the *Virginia Standards of Learning for Mathematics*, and the standards identified by the National Council of Teachers of Mathematics in the following content areas: (a) number systems, their structure, basic operations, and properties; (b) elementary number theory, ratio, proportion, and percent; (c) algebra; (d) geometry; and (e) probability and statistics.
7. Evaluate, select, and adapt a variety of instructional materials, manipulatives, technologies, and teaching strategies to engage diverse young learners in mathematics.
8. Describe strategies to help young children become mathematically literate, think critically and creatively, and to see the relationships between mathematics and other content areas.
9. Construct mathematics experiences in an environment that promotes equity and responds to cultural, linguistic, and ability diversity.
10. Describe the appropriate use of calculators and technology in the teaching and learning of mathematics, including virtual manipulatives.
11. Develop informal assessment strategies to describe young children's understanding of mathematics concepts.
12. Analyze and evaluate qualitative and quantitative research literature to determine effective evidence-based practices for diverse young learners and inform instruction and use technology for learning, research, and communication.
13. Summarize and present research on evidence-based practices in teaching mathematics with diverse young children.
14. Engage in reflection, collaboration, and continuous learning to develop professionally.
15. Exhibit standards of professionalism, ethical standards, and personal integrity with children, families, and professionals in the field and in interactions with classmates, the instructor, the field experience coordinator, and others.
16. Use writing as an instructional and assessment tool to generate, gather, plan, organize, and to communicate for a variety of purposes; integrate correct written conventions (i.e., grammar, usage, mechanics, and spelling); and format using current APA style.

### **Professional Standards**

Interstate Teacher Assessment and Support Consortium (InTASC) Teaching Standards, Division of Early Childhood (DEC) Initial Practice-Based Professional Preparation Standards for Early Interventionists/Early Childhood Special Educators (EI/ECSE), National Association for the Education of Young Children (NAEYC) Professional Standards and Competencies for Early

Childhood Educators, Virginia Professional Studies Endorsement Competencies, and Virginia Early/Primary Education PreK-3 Endorsement Competencies

Upon completion of this course, students will have met the following professional standards:

**Virginia Early/Primary Education PreK-3 Endorsement Competencies**

Methods

Knowledge and Skills: Mathematics

**Required Texts**

American Psychological Association. (2020). *Publication manual of the American Psychological Association* (7th ed.). Author. ISBN: 9781433832161

Copley, J. V. (2010). *The young child and mathematics* (2nd ed.). Washington, DC: National Association for the Education of Young Children. ISBN: 9781928896685

National Council of Teachers of Mathematics. (2000). *Principles and standards for school mathematics*. Author. <http://www.nctm.org/standards/content.aspx?id=16909>

National Council of Teachers of Mathematics. (2006). *Curriculum focal points for prekindergarten through grade 8 mathematics*. Author. <http://www.nctm.org/standards/content.aspx?id=270>

Access Blackboard for required and optional class readings.

**Course Performance Evaluation**

Students are expected to submit all assignments on time in the manner outlined by the instructor (e.g., Blackboard, VIA, hard copy).

Assignments	Due Dates	Points
Attendance and Participation • Self-Evaluation	Ongoing March 12	25
Personal Journal • Part 1 • Part 2	January 30 March 9	5 5
Mathematics Activity Share	Variable	15
Teaching Math Through Picture Books Poster and Presentation	February 9	10
Research Brief: An Inquiry Into Evidence-Based Practices and Presentation	February 16	15
Family Math Night Activity Implementation and Reflection • Part 1: Planning the Activity	February 23	25 10

Assignments	Due Dates	Points
<ul style="list-style-type: none"> <li>Part 2: Collecting Data</li> <li>Part 3: Reflecting on the Activity</li> </ul>	February 23 March 9	5 10
<b>TOTAL</b>		<b>100</b>

- **Assignments and/or Examinations**

**Personal Journal (10 points; Part 1=5 points, Part 2=5 points)**

- **Part 1:** To initiate class experiences, students will write a critical reflection on their personal experiences as a learner of math (2 pages). They will use the following prompts to help guide their reflection process.
  - Begin with your earliest memories (give examples) and reflect until the present as an undergraduate student in a teacher preparation program.
  - Reflect on your experiences in school, out of school, in the context of your family, etc.
  - What thoughts do you tell yourself about math (e.g., ANTs = automatic negative thoughts/assumptions/not truths)?
  - How do you see yourself as a math learner?
  - Why do you think you feel that way?
  - How do you think these experiences will shape you as a teacher of math? In other words, what positive impacts or challenges on your teaching practice do you foresee from your prior experiences or self-conception?
- **Part 2:** In conclusion of the course, students will revisit their initial thoughts in their first journal entry and reflect on how their thoughts and/or self-conception have changed, if at all (2 pages). They will use the following prompts to help guide their reflection process.
  - What thoughts do you tell yourself about math (e.g., ANTs)? Have your thoughts changed? Your self-conception related to math?
    - If you did in the first place, do you still have ANTs?
    - What do you do if you have an ANT?
    - How does this change, if at all, how you will work with your future students?
  - How did learning about cognitive behavioral therapy (CBT) and transactional analysis (TA) impact your feelings about the course and math? Was it helpful?
  - Do you view yourself as a math learner differently than you did before?
  - What have you learned in the course?
  - Is there a concept you learned in the course that really stuck out for you? (Include references to course readings, as necessary.)
  - Is there a particular reading, handout, or material from class that you found particularly helpful or eye-opening? (Include references to course readings, as necessary.)
  - Articulate the kind of early childhood mathematics teacher you plan to be. Will something you learned in the course be included in your guiding principles?

### **Mathematics Activity Share (15 points)**

Students will choose a mathematics content area from one of the following: (a) number systems, their structure, basic operations, and properties; (b) elementary number theory, ratio, proportion, and percent; (c) algebra; (d) geometry; and (e) probability and statistics during the first class session in which to present an activity. Three students will sign up per content area: one person will focus on PreK, one on K-Grade 1, and one on Grades 2-3. Check sign-up sheet to avoid duplication of activities. Individual students will prepare a lesson plan using the template provided for the activity they will present. Math activity share should be 15-minutes in duration.

Before the mathematics activity share, students will post all share materials (lesson plan, resources) on Blackboard under Discussion Board. Students should prepare seven PPT slides to organize and guide the presentation; Slide 1 – Introduction/Overview of Topic, Slide 2 – Standards, Slide 3 – Instructions for Activity/List of Materials, Slide 4 – Classroom Management Recommendations, Differentiation Strategies for a Range of Learners, Slide 5 – Direct Instruction of Math Concept, Slide 6 – Takeaways from Practitioner Journal Article, Slide 7 – Additional Resources (picture books, websites, manipulatives, games, etc.). Further explanation of Activity Share criteria is as follows:

- An overview of the topic to include the key ideas or content and the importance of the topic to children’s mathematics learning
- An overview of relevant state and national content standards at the appropriate grade level(s), noting consistencies (or inconsistencies, if the case may be)
- A description of classroom and behavior management strategies that would increase the effectiveness of the implementation of the activity
- Materials appropriate to the activity (use own or borrow from the instructor; attempt to use items that can be found easily around the home; materials should be visually attractive and engaging for young learners)
- Modeling of the math concept (model yourself, do not use a video to do the teaching for you); It should be evident that the student has read the course material on the mathematics topic
- Modeling how to engage in the activity chosen for math concept. Math activity should be in-line with the type of math teaching practices we are learning about in the course (e.g., hands-on with materials, not a worksheet)
- Modeling of the math concept and activity should be role played as if student is the teacher and classmates are young learners in the class
- Preparation for how to adapt the activity for a range of learners
- A list of at least three resources related to teaching the topic that could include children’s literature, websites, manipulatives or materials, or other teacher resources (at least one must be a relevant developmentally appropriate picture book and one must be an article from a practitioner journal (e.g., NCTM’s *Teaching Children Mathematics*) on the topic).

### **Teaching Math Through Pictures Books Poster and Presentation (10 points)**

To engage in the core math content areas of (a) number systems, their structure, basic operations, and properties; (b) elementary number theory, ratio, proportion, and percent; (c) algebra; (d) geometry; and (e) probability and statistics in an appropriate interdisciplinary context, students will choose a picture book focused on a math concept. They will make either a hard copy or an electronic poster that includes the following information: title, author, possible math concepts

explored within the text, appropriate age/grade level, relevant standards, a meaningful quote from the picture book, instructions and diagram(s) for a relevant interactive activity for children, and a rationale (no more than one double-spaced page) for decisions made, including citations of at least two course readings. Students should have materials for the activity available to show classmates during presentation. Students will present their posters to classmates during an in-class poster session. Students will upload an electronic copy of the poster to Blackboard in addition to their rationale.

### **Research Brief: An Inquiry into Evidence-Based Practices (15 points)**

In two-person partnerships, students will identify a question of interest related to the teaching of mathematical concepts to diverse young learners. Each student will conduct a literature search to identify four research articles (eight total per pair) related to the question published in peer-reviewed journals. Each student will read the articles identified in the literature search.

Student partners will prepare a two-page, single-spaced research brief, including the reference list, that presents the findings of four of the research studies read and analyzed (each student will choose two of the articles for which to write summaries). Students will follow APA style and will include the following:

- An introduction that presents the question, describes the mathematical concept that is the focus of the inquiry, and provides an overview of the research
- A paragraph summary for two research articles, including (a) a brief description of the participants, (b) a brief summary of the methods, and (c) an overview of the findings (Each student will be responsible for drafting two of the summary paragraphs. They will be responsible for reviewing and providing feedback on their partner's two summary paragraphs.)
- A conclusion that summarizes what the research says about teaching the selected mathematical concept to diverse young children
- Citations within the brief to support the evidence presented
- A bibliography, including the four articles summarized plus the additional four articles read

As part of the inquiry process, students will use the research synthesis to inform their *mathematics implementation lesson and reflection* assignment.

Partners will present their research brief in class. Students will prepare a PowerPoint presentation to share their inquiry into evidence-based practice. Students will summarize what the research says about teaching the selected mathematical concept to diverse young children. Slides will include (a) title slide, (b) introduction to line of inquiry, (c) implications for practice, and (d) references.

### **Family Science Night Activity Implementation and Reflection (25 points)**

In the same two-person Research Brief partnerships, students will choose a developmentally appropriate, hands-on science activity in one of the core math content areas as defined by *Virginia's Early Learning and Development Standards*, the *Virginia Math Standards of Learning*, and the *National Council of Teachers of Mathematics Standards* from either the course textbooks, Virginia Department of Education, NCTM Math Innovations, or resources shared in class. They will implement the activity during a Family Math Night at the Main Street Child

Development Center (CDC) during regularly scheduled class time to multiple groups of young children and their families, making necessary modifications and taking reflective notes (*date TBD*). Students will bring any necessary materials for the activity. If a student is absent on the day of implementation, she/he will need to make arrangements with the CDC to visit during her/his own time to fulfill the assignment. One partner will lead the activity while the other partner takes anecdotal notes during the multiple iterations and then the partners will switch roles. Partners will lead the same activity. Students will submit a written reflection individually in three parts.

- ***Planning the Activity (10 points)***. The first part of the reflection will be due before the experience and will include how the activity was selected; how course readings support the selection of the lesson plan; what adaptations were made, if any, to the lesson plan and why; and how the students prepared to implement the activity. Students will include plans for materials selection and preparation, classroom and behavior management, building community, and creating and maintaining a safe environment. In this part, students will be assessed on their preparation of all of the necessary materials for the activity, including being prepared to implement the activity upon arrival at the CDC. Partners will write and submit this reflection individually, but are encouraged to collaborate and provide feedback for one another. (2 to 3 double-spaced pages)
- ***Collecting Data (5 points)***. The second part of the reflection will be due before the experience and will include (a) a statement about their ethical considerations as they planned for the data collection and (b) a plan for collecting quantitative and qualitative data. Partners will develop an observational tool (a teacher's checklist) to use to collect data about the children's participation in the activity (e.g., behavior, participation, understanding). They will also identify artifacts (may be photos) they will collect and how they will be assessed using a scoring rubric (must be submitted) and analyzed to determine children's learning of the concept. Partners will write and submit this reflection individually, but are encouraged to collaborate and provide feedback for one another.
- ***Reflecting on the Activity (10 points)***. The third part will be due after the experience and will include an analysis of the qualitative and quantitative data collected as well as a reflection on how the activity went (what went well, what could have been done differently/better for next time), key learnings, and "aha" moments. Students will use the analyzed data and their own observations to reflect on both teacher learning (themselves) and children and family learning during the experience. Students also will reflect on their classroom and behavior management and how they fostered a sense of community and "welcomeness." Students will provide specific linkages to course readings and research examined for the inquiry into evidence-based practices. They will conclude the reflection by posing a compelling question about next steps for supporting children's understandings. Partners will engage in reflective discussions about their analysis of the data and the implementation of the activity, but will submit written reflections independently. (3 double-spaced pages)

- **Other Requirements**

### **Attendance and Participation (25 points)**

Active participation and engagement are imperative for optimal learning. Therefore, students will prepare for and participate in in-class and online activities. Students will be expected to do the following:

- Attend class, arrive on time, and stay for the entire class period for all in-person and online synchronous class sessions.
- Complete all online asynchronous work by the due dates.
- Use laptops and personal devices for instructional purposes only during in-person and online synchronous class sessions.
- Complete readings and prepare for class activities prior to class as evidenced by the ability to discuss, write about, and engage in activities related to the concepts presented and examined in the texts.
- Complete participation activities across the semester that complement the scheduled course topic. *Note: Instructors will periodically collect artifacts from the activities.*
- Support the participation and learning of classmates. Students in attendance and who actively engage in the learning experience will receive credit for their efforts. Graded participation activities are not announced and are implemented at the discretion of the instructor.
- Show evidence of critical reflective thinking through in-person, online synchronous, and online asynchronous discussions, activities, and written reflections.
- Display professional dispositions at all times when interacting with the instructor, classmates, and other professionals.
- Submit an attendance and participation self-evaluation.
- Students submit a 2-3-page written reflection of the content covered (e.g., class presentation, course readings, student activity share presentations, content on Blackboard) of any missed class. Reflection is due within 1 week after an absence.

### **Written Assignments**

All formal written assignments will be evaluated for content and presentation. The American Psychological Association, Seventh Edition (APA) style will be followed for all written work. All written work unless otherwise noted must be completed on a word processor and should be proofread carefully. (Use spell check!) If students are not confident of their own ability to catch errors, they should have another person proofread their work. When in doubt, they should check the APA manual. Students may consult the Writing Center for additional writing support.

Students will do the following:

1. Present ideas in a clear, concise, and organized manner. (Avoid wordiness and redundancy.)
2. Develop points coherently, definitively, and thoroughly.
3. Refer to appropriate authorities, studies, and examples to document where appropriate. (Avoid meaningless generalizations, unwarranted assumptions, and unsupported opinions.)
4. Use correct capitalization, punctuation, spelling, and grammar.

5. Type the paper with double spacing, indented paragraphs, 1-inch margins all around, and 12-point Times New Roman font.

- **Grading**

A = 95-100 A- = 90-94 B+ = 87-89 B = 80-86 C = 70-79 F = <70

Incomplete (IN): This grade may be given to students who are passing a course but who may be unable to complete scheduled coursework for a cause beyond reasonable control.

All CEHD students are held to the university grading policies as described in the Academic Policies section of the current catalog, which can be accessed at <http://catalog.gmu.edu>. Those students enrolled in a CEHD Licensure Graduate Certificate program, however, must earn a B- or better in all graduate licensure coursework. A degree-seeking graduate student will be dismissed after accumulating grades of F in two courses or 9 credits of unsatisfactory grades (C or F) in graduate courses. A 3.0 grade point average is required for completion of the graduate degree.

**Professional Dispositions**

Students are expected to exhibit professional behaviors and dispositions at all times. See <https://cehd.gmu.edu/students/policies-procedures/>.

**Core Values Commitment** The College of Education and Human Development is committed to collaboration, ethical leadership, innovation, research-based practice, and social justice. Students are expected to adhere to these principles: <http://cehd.gmu.edu/values/>.

### GMU Policies and Resources for Students

#### *Policies*

- Students must adhere to the guidelines of the Mason Honor Code (see <https://catalog.gmu.edu/policies/honor-code-system/>).
- Students must follow the university policy for Responsible Use of Computing (see <https://universitypolicy.gmu.edu/policies/responsible-use-of-computing/>).
- Students are responsible for the content of university communications sent to their Mason email account and are required to activate their account and check it regularly. All communication from the university, college, school, and program will be sent to students **solely** through their Mason email account.
- Students with disabilities who seek accommodations in a course must be registered with George Mason University Disability Services. Approved accommodations will begin at

the time the written letter from Disability Services is received by the instructor (see <http://ds.gmu.edu/>).

- Students must follow the university policy stating that all sound emitting devices shall be silenced during class unless otherwise authorized by the instructor.

#### *Campus Resources*

- Support for submission of assignments to VIA should be directed to [viahelp@gmu.edu](mailto:viahelp@gmu.edu) or <https://cehd.gmu.edu/aero/assessments>. Questions or concerns regarding use of Blackboard should be directed to <https://its.gmu.edu/knowledge-base/blackboard-instructional-technology-support-for-students/>.
- For information on student support resources on campus, see <https://ctfe.gmu.edu/teaching/student-support-resources-on-campus>.

**Notice of mandatory reporting of sexual assault, sexual harassment, interpersonal violence, and stalking:** As a faculty member, I am designated as a “Non-Confidential Employee” and must report all disclosures of sexual assault, sexual harassment, interpersonal violence, and stalking to Mason’s Title IX Coordinator per [University Policy 1202](#). If you wish to speak with someone confidentially, please contact one of Mason’s confidential resources, such as [Student Support and Advocacy Center](#) (SSAC) at 703-380-1434 or [Counseling and Psychological Services](#) (CAPS) at 703-993-2380. You may also seek assistance or support measures from Mason’s Title IX Coordinator by calling 703-993-8730 or emailing [titleix@gmu.edu](mailto:titleix@gmu.edu).

**For additional information on the College of Education and Human Development, please visit our website:** <http://cehd.gmu.edu>.
